

**KTH Industrial Engineering
and Management**

D2.2 Implementation of e-Learning Tools

[Virtual Campus Hub](#) is partially funded by the [European Commission](#) under the [7th Framework Programme](#).

KTH, Energy Technology Department, July 2013

Torsten Fransson, Professor
Lucio Monaco, PhD student

The e-learning tools included in WP2 of the Virtual Campus Hub project have been fully developed. These include:

- Three remote laboratory exercises related to turbomachinery
- Continuous examination tools (multiple choice questions and calculation exercises for automatic correction)

The remote laboratory exercises have been used and assessed by students and researchers from all of the four (KTH, DTU, Polito, TUE) partner universities in the project as well as from students and professionals in industry. All information on the laboratories has been collected and deployed to a public website¹.

The continuous examination tools have been extensively used in courses at KTH. Access to a selection of the tools developed in the local LMS has been granted to the project partners.

It is therefore considered that the e-Learning Tools included in WP2 of the Virtual Campus Hub project have been implemented and deployed to the VC Hub community.
